Intro: Check-in

Share with your neighbour:

- What have you done already?
- Where are you right now?
- What is your next step?

Task 1: Two-minute pitch

- Gather in groups of 4 people. These can be your project groups (but they do not have to be).
- Pick a project. This can be “your” project or a sample project from the course website.
- Imagine you are asked to present your project to your employer in less than two minutes during a job interview.
- Choose one from the group to give the presentation.

Task 2: Resources

- Think back to the project presentations you have heard. Also consider your own project.
- What resources are essential to carry out the project?
What additional resources would make the project truly great?
- Which of these resources do you have available today?
Which resources do you still need to secure?
- Discuss in your groups.

Task 3: Risks

- Identify the top three risks for your current idea of the project:
What could go wrong? What is uncertain?
- For each risk, decide: Can we mitigate it? Can we accept it?
Do we need to change our plan?
- Write down the risks on the whiteboard.

Outro: Commitment

- Agree on one concrete next action that your group will take in the next 48 hours.
- Who owns the action?
What does “done” look like for this action?
- Publicly state the action.
